

CSC APPLICATION CLOUD ENABLEMENT

THE ACE UP YOUR SLEEVE

CSC

GET YOUR LEGACY APPLICATIONS READY FOR CLOUD

ARE YOU

- Tempted by the agility, scalability and elasticity offered by cloud?
- Finding that your legacy application estate is aging, growing more costly, difficult and unpredictable to support?
- Spending a growing share of your applications budget on maintenance rather than meeting new business requirements?
- Having difficulty adding functionality to applications?
- Struggling with recurring application availability and performance issues?
- Looking for new ways to charge application services to the business based on usage?
- Experiencing organizational changes that are disrupting your infrastructure?
- Looking for new and improved ways to deliver applications to your colleagues and customers?

BENEFITS

CSC Application Cloud Enablement:

- Accelerates the migration of legacy applications to the cloud
- Enhances your business agility by enabling the more rapid implementation of new and changing business requirements
- Cuts the cost of application maintenance by shifting applications to lower-cost platforms
- Reduces operational risk while improving application availability and performance
- Improves performance against business SLAs
- Helps to increase application accessibility
- Enables you to increase your focus on innovation and transformation
- Lets you automate and standardize application delivery

Cloud promises manageability, control and elasticity that traditional infrastructure can't match — that's why 80% of enterprises are already using or investigating it. Cloud's greater flexibility could resolve the conflict between growing business demands for application services and ever-shrinking IT budgets. But many legacy applications simply aren't ready to run in the cloud. Migrating them can be risky — especially when your applications are older or mission-critical. And big transformation engagements require resources and skills you might not have in-house. That's where CSC's Application Cloud Enablement comes in.

WHAT IS IT?

CSC Application Cloud Enablement (ACE) is a suite of services, proven processes and patent-pending automation technologies, delivered by our technical and industry application specialists. ACE makes it quicker, cheaper and less risky to migrate legacy applications to run in the cloud. Unlike traditional modernization services, ACE is specifically tailored for cloud enablement and spans the entire lifecycle, enabling you to:

- Realize the benefits of infrastructure as a service (IaaS) and platform as a service (PaaS) environments, quickly and economically
- Tackle applications, infrastructure and operations complexity together for maximum return on investment
- Undertake complex and large-scale transformation without overburdening in-house staff
- Migrate in a way that suits your business, wherever you are on the journey to cloud

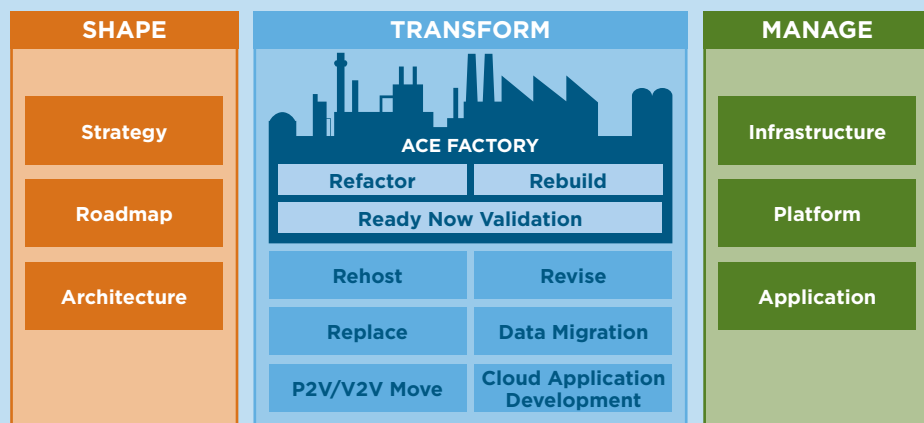

ACE is an integrated service that provides the strategy, infrastructure, application and organizational change capabilities necessary to fully capitalize on the move to cloud computing.

HOW IT WORKS

We start by building a thorough understanding of your business strategy, infrastructure and operations model and the current state of your application architecture, including your goals for cloud. Then we identify your target cloud architecture with a costed roadmap and take you through a disciplined migration process, drawing on our experience of managing large-scale technological and organizational transformations. As well as transforming the applications themselves, we can also support your data migration needs. And of course, we can also manage your transformed applications for you, wherever they run — in our Trusted Cloud data centers, or one belonging to you or a third party.

Although "Shape, Transform, Manage" is recommended for achieving your application portfolio cloud-enablement goals, we recognize that many of your applications are candidates for 'Ready Now Workloads'. These already virtualized applications — with enabling components already proven to run in the cloud — simply need to be validated and deployed. Such 'Ready Now Validation' is a great place to get started and demonstrate early successes on your cloud journey.

Major application modernizations are complex projects, and no two are identical. That's why Applications Cloud Enablement engagements follow CSC's proven "Shape, Transform, Manage" approach.

WE DELIVER YOUR MIGRATION, YOUR WAY

Every business is different. CSC Application Cloud Enablement is tailored to your situation, including the needs of your applications, your business goals and your existing experience with cloud computing. We can test and validate your legacy applications for cloud readiness, transform your applications to be cloud aware, and even create new applications to run natively in the cloud.

Afterwards, you can choose to run your cloud applications on either a public or private cloud and self manage your cloud application or have us host and manage your applications for you. CSC Application Cloud Enablement is a truly modular suite of services that gives you a custom outcome, but with all the consistency and efficiency of a turnkey, industrialized framework.

WE PUT BUSINESS NEEDS FIRST

Applications are core to your business, and there are commercial reasons behind demands for new services and application modernization. That's why understanding where the business wants to go, and what it will take to get there, is a fundamental first step in any transformation.

We have the skills and experience to understand your business, and ensure that the right decisions are made as you progress along the roadmap to the desired future state — whether that's identifying what types of applications to run on what type of cloud platform, or ensuring the correct balance between control and flexibility.

A PORTFOLIO AND EXPERTISE THAT YOU CAN TRUST

When you're modernizing something as critical as your application platform, you want to know that you're getting the best technology and expertise available. CSC is at the forefront of delivering enterprise-ready cloud services:

- Our architects and developers are experts in modern development frameworks like VMware's Spring and world-class cloud platforms like VMware's vFabric, Force.com and Microsoft Azure
- CSC CloudCompute, a VMware vCloud® Datacenter Service offering, our industry-leading infrastructure as a service solution, allows clients to realize the flexibility, speed and economies possible through cloud computing without sacrificing reliability or security
- CSC BizCloud, a VMware vCloud® Datacenter Service offering, is the industry's only private cloud installed behind your firewall and billed as a service
- Our worldwide network of cloud-enabled data centers offers the levels of security, continuity and sustainability required for enterprise-class operations

WHY CSC?

- We consider every aspect of application cloud enablement; not just how to transform your legacy applications, but which to migrate, in what order and where to
- We have the broad range of skills required: application management, business process transformation, portfolio reviews and hands-on application development — including refactoring, rebuilding, rehosting, revising, and replacing
- We have over half a century's experience of delivering enterprise-grade application, infrastructure, network and security services
- Our unique intellectual property and repeatable processes enable us to reduce risk and deliver higher quality results
- We're experts in all the major cloud technologies and infrastructures
- We have strong strategic partnerships with the leading vendors

AWARDS AND CERTIFICATIONS

- VMware's Systems Integrator of the year 2010 in three categories: Global, North America and Asia Pacific
- VMware's EMEA Systems Integrator/System Outsourcer Alliance Partner 2011
- EMC's Journey to the Cloud 2011 in two categories: Partner Innovation for Products and Services
- SAP® certified for cloud services
- 2010 SAP® Pinnacle Awards for Customer Satisfaction and Sustainability
- The Cloud Security Alliance (CSA), a not-for-profit organization that promotes the use of cloud security, has integrated our Cloud Trust Protocol as a pillar of their Governance, Risk and Compliance (GRC) stack

About CSC

The mission of CSC is to be a global leader in providing technology-enabled business solutions and services.

With the broadest range of capabilities, CSC offers clients the solutions they need to manage complexity, focus on core businesses, collaborate with partners and clients and improve operations.

CSC makes a special point of understanding its clients and provides experts with real-world experience to work with them. CSC is vendor independent, delivering solutions that best meet each client's unique requirements.

For 50 years, clients in industries and governments worldwide have trusted CSC with their business process and information systems outsourcing, systems integration and consulting needs.

The company trades on the New York Stock Exchange under the symbol "CSC".
