Delivery via CD-ROM or DVD

Mix and Match Delivery
Services with CD-ROM Plus

High-Volume Transaction
Delivery

Replacement for IRD Return
and Print

Integrated Daily Cash
Management Feeds

Reduced Fraud Exposure
and Costs

CSC's CheckVision® e-Data Delivery application suite provides the latest vehicles for secure and flexible delivery of check images, statements, reports, lockbox and associated payment data to your retail banking and corporate customers. CheckVision Virtual CD-ROM software allows banks to give customers a cost-effective, secure delivery for cash management data via the Internet.

The suite includes CheckVision CD-ROM Plus, Lockbox CD-ROM and Virtual CD-ROM. Supporting modules include CheckVision Scheduler and Encryption, and the system also requires CheckVision Image Framework, CSC's proven high-volume architecture. Images can come from CheckVision Archive or third-party industry archives.

Distribution via Electronic Delivery

Each month financial institutions burn and mail hundreds of cash management CD-ROMs to their customers. This method provides electronic versions of cash management statements, reports, retail and wholesale lockbox data, and associated check images that corporate customers can store and control locally, and can organize and search on a wide array of data fields. The CheckVision e-Data Delivery suite includes CD-ROM Plus software to facilitate this method.

Now CSC has added an exciting new delivery mechanism for the same content: the Internet. Using CSC's Virtual CD-ROM module, banks can now offer commercial account holders a downloadable data bundle distributed across the Web that self-installs onto customer-provided local storage and interoperates with the cash management software solution available for CD-ROMs.

Faster and More Efficient Delivery

Using the Internet to deliver customers' cash management data is cost-effective, efficient and much faster than delivering CD-ROMs via a postal service. The improved ease and efficiency of Virtual CD-ROM also enables banks to distribute cash management data more frequently. Integrated daily updates through Virtual CD-ROM can even help bank customers to approximate real-time cash management.

Corporate customers may also appreciate the option of both Virtual CD-ROM and CD-ROM Plus for data redundancy and backup. Because Virtual CD-ROM is designed to interoperate with the viewers and data delivered via CD-ROM Plus, using one or both methods of delivery should appear transparent to the bank's customers.

Business Benefits of Virtual CD-ROM

- Delivers cash management data bundles quickly, conveniently and at low cost
- Allows banks to provide cash management reports to customers daily, weekly or monthly without extra staff or expense
- Saves money by eliminating the preparation and shipment of large volumes of paper
- Opens more opportunities for product portfolio penetration and fee-based services
- Helps keep sensitive customer data secure
- Helps retain corporate customers looking for more flexibility from their banking provider

Safer Data Delivery with Encryption

Both Virtual CD-ROM and CD-ROM Plus leverage CSC's Encryption software. CSC's industry leading data encryption method employs a symmetric key algorithm using the U.S. Department of Defense Advanced Encryption Standard (AES) with up to 256-bit length keys.

CheckVision's just-in-time Encryption software creates a special customer key CD that banks send to their commercial customers to install and store on their network drive or on individual PCs that require access to the protected data. Thereafter, cash management data downloads or CD-ROMs leave the bank encrypted by CheckVision and can only be decrypted by that customer with that customer's unique key library.

Features of Virtual CD-ROM

- Ready-to-download, self-executing installation data-bundle
- Production-ready, high-volume workflow integration
- Integration with CSC's industry leading Encryption and CD-ROM Plus software
- Same viewer as CSC's CD-ROM Plus software

With CSC's Virtual CD-ROM, you can improve customer service as you reduce the expense of delivering checks and other account information — all while securing your customers' data with the highest levels of encryption available today.
