CHECKVISION IMAGE FRAMEWORK

AT A GLANCE

Create Robust Framework for High Performance

Accommodate High-Volume Transaction Delivery

Integrate Image Delivery into Workflow

Enable Scheduling and Image Retrieval

Reduce Operating Expenses and Fraud Exposure

Cost-Effective, Information-Based Transaction Delivery Solution

Each month, more than 3 billion checks move through the U.S. banking system. Traditionally, banks have delivered these checks along with statements to their retail and corporate customers. Although image and electronic delivery systems have been available for several years, paper-based statement and check delivery remains a reality and is a time- and labor-intensive process.

CSC's CheckVision® Image Framework is a workflow-based, high-performance, transaction-delivery solution. It transforms traditional paper-intensive transaction operations into more efficient information-based delivery services. Banks schedule and retrieve check images, statements, reports and lockbox data from CheckVision Archive and other industry archive solutions.

A Single Platform for Many Image-Enabled Products

The proven, high-volume CheckVision Image Framework architecture enables new delivery services for retail and corporate customers while reducing operating expenses and fraud exposure. Comprehensive cash management services in CheckVision Image Framework include image ARP, lockbox and controlled disbursement. CheckVision Image Framework's common interface for systems used in the delivery and viewing of check images, allows a bank's customers to mix and match delivery types as desired.

CheckVision Image Framework provides infrastructure for CSC's CheckVision Image Delivery, including the e-Data Delivery application suite. These additional CheckVision applications include multiple electronic delivery options to address various bank customer segments and include:

- CD-ROM Plus
- Virtual CD-ROM
- Lockbox CD-ROM
- Encryption
- Scheduler.
- Image Statements

CheckVision Image Framework produces image statements, in industry-standard print formats like IBM AFP, Xerox Metacode, that combine the customer statement with check images. Instead of sending each customer a monthly envelope filled with checks, statements and reports,

the bank sends a statement with images of all the checks, sorted by number and neatly arranged to facilitate account reconciliation.

Integration with Image Archives

By providing easy integration with CSC's CheckVision Archive and other third-party archive solutions, CheckVision Image Framework lets you access the millions of stored transactions in your system. As you meet the legal requirements of storing billions of check and MICR document images, whether all transaction information is in one "storehouse," as with CheckVision Archive, or distributed, CheckVision Image Framework helps with workflow and automation tools for easier sharing and retrieval.

Business Benefits

- Efficiently creates delivery channels for images/statements and check transaction information for delivery to retail and corporate customers
- Streamlines operations
- Improves customer service
- Lowers operating expenses
- Provides maximum integration of client data with financial operations
- Eliminates need for microfilm storage
- Improves audit control.

Technology Benefits

- Provides a robust, scalable framework for the performance infrastructure needed to handle volume growth
- Simplifies with a single platform for many image-enabled product types
- Includes an easy-to-use image viewer via a Windows application or Internet browser
- Simplifies troubleshooting with transparent system controls
- Enables parallel batch processing with specialized workflow components.

Integrated Payments Systems

CSC understands the challenges that face your financial institution. With CheckVision Image Framework, you enable the scheduling and retrieval of check images, statements and reports at high volumes while you improve customer service and fraud protection.

CSC's applications to automate payments processing throughout your operation include CheckVision Archive, CheckVision Image Delivery, and Remittance Processing. This comprehensive suite can be implemented as a single transaction system or as a stand-alone archive solution.

For more information about CheckVision Image Framework, call 800.345.7672 or send an e-mail to inforequests@csc.com.

About CSC

CSC, one of the world's leading consulting and IT services firms, helps clients in industry and government achieve strategic and operational results through the use of technology. The company's success is based on its culture of working collaboratively with clients to develop innovative technology strategies and solutions that address specific business challenges.

Having guided clients through every major wave of change in information technology since 1959, CSC combines the newest technologies with its capabilities in consulting, systems design and integration, IT and business process outsourcing, applications software, and Web and application hosting to meet the individual needs of global corporations and organizations.

About CSC in Financial Services

CSC distinguishes itself through its time-tested ability to plan, build and operate highly reliable, efficient and secure business and IT solutions for leading financial services firms around the world. To complement its capabilities in consulting, systems integration and outsourcing, CSC brings financial services industry knowledge and experience, a comprehensive portfolio of financial services application software and an extensive network of industry and technology partners. More than 10,000 CSC employees are dedicated to serving financial services clients, including more than 1,200 major banks, insurers and investment management and securities firms.
