CSC's Centers of Excellence help clients explore state-of-the-art solutions with minimum up-front investment, leveraging CSC's top talent to maximize innovation and results. Each center has a designated facility and staff who demonstrate and deliver solutions and evaluate products, methodologies and concepts.

Over the past two decades, companies have been moving to enterprise systems to consolidate and optimize their business processes. Many adopted packaged software, some consolidated using custom solutions, and others adopted a hybrid approach. While this may have achieved the business objectives at the time, these enterprise systems were found to be inflexible, costly to operate, and difficult to adapt to business change. CSC believes that enterprise systems will evolve into a Business Operations Platform (BOP), a platform that leverages state-of-the-art technology such as Composite Applications, Service Oriented Architecture (SOA), Business Process Management (BPM), Business Activity Monitoring (BAM), and Master Data Management (MDM) to quickly and efficiently optimize business processes.

CSC's Cordys Center of Excellence was formed to advance CSC's leadership in BOP, as well as help our clients and internal business units rise to the challenge of capitalizing on BOP opportunities. Based on our research, we found that Cordys technology provides the world's most advanced, integrated BOP, and quickly partnered with Cordys in establishing our BOP Center of Excellence.

The mission of the Cordys Center of Excellence is to provide:

- Thought leadership on agile business transformation leveraging BOP technology
- Industry expertise to create demonstrations and solutions for our customers
- Robust Cordys delivery excellence
- Training programs for our clients and staff
- Capture of best practices and reusable solutions

BENEFITS

- Agile approaches to business transformation that deliver incremental results in a matter of weeks, versus having to wait months or years
- Better business and IT alignment via collaborative methods that have business analysts working side-by-side with IT
- State of the art Cordys technology that extends current enterprise systems (versus expensive rip and replace approaches), delivering more flexible, lower-cost solutions

- Solutions that quickly achieve business objectives, while at the same time avoiding complex package software customizations, deferring expensive enterprise system upgrades and avoiding the need for additional packaged software licenses

CSC operates the Cordys Center of Excellence in the United States, United Kingdom and the Netherlands with delivery support from our offshore centers, especially those in India. With these locations, CSC will continue to develop the future agile business transformation capability on Cordys.
