

You have real-world challenges— We provide real-world solutions. Your mission success is the primary measure of our success. Teaming with you, CSC supports practical solution development for the daily challenges that arise in your mission-critical environments.

Applied Technology Group

In this time of high-performance expectations combined with ever-shrinking budgets, we bring practical, experience-driven solutions. We excel at operating in dynamic environments providing responsive and flexible management with the correct skills to execute missions. Our systems integration background enables us to deploy the best mission-tailored solution, powered by technologies that provide real-time decision-making capability. Why does this matter? Because the right solution properly and efficiently implemented enhances performance and lowers cost.

Our most-valued assets are our people. They have the experience to deliver the results you require. Headquartered in Fort Worth, Texas, ATG employs approximately 13,842 personnel in more than 42 worldwide locations. ATG is part of the CSC North American Public Sector and specializes in:

- Space and Aviation Services
- Infrastructure Services
- Training and Range Support Services

Space and Aviation Services

Over the last 50 years, the space and aviation industries have made dramatic advances. We have been there every step of the way. ATG space and range services divisions have supported over 450 successful government and commercial launches, making us the leader in operational launch support.

With experience on more than 200 aircraft types and 75 engine types—from crop dusters to the space shuttle carrier—we can provide pilots, aircrew, and training; all three levels of DoD aircraft maintenance for fixed- and rotary-winged aircraft; and aeronautical and reverse engineering of foreign and U.S. assets. CSC provides engineers, technicians, and a management team capable of providing end-to-end technical range and aviation solutions and comprehensive logistics support that keeps pace with the industry. ATG has the personnel, skills, and experience to keep you flying.

Infrastructure Services

Government and industry have increasingly looked to infrastructure support to improve operations, support cost-cutting efforts, and transform business. ATG continues to provide infrastructure services to the government through fuel and supply operations; retail transportation; utility plant operation; communication and IT; civil engineering design; operation, maintenance, and construction management; emergency management; airfield management; transient aircraft maintenance; weather support; custodial services; morale, welfare, and recreation support; and environmental management. We can provide integrated logistics and managed services that leverage the power of our expertise in IT; engineering; business processes; procurement, warehousing and distribution; and managing human capital and financial resources.

Training and Range Support Services

CSC supports multiple, concurrent missions through state-of-the-art training methodologies, processes, and technologies; research, development, test and evaluation requirements; and operational performance assessments for U.S. and international clients. We deliver consistent, high-quality results within budget; outstanding leadership; and a rapid response track record. CSC is a world leader in training systems development and implementation and comprehensive range services and support.
