Solution Expertise

CSC is the link between client needs, emerging technologies, and commercial off-the-shelf (COTS) products — we perform proof of concept and validation of promising technologies and products to optimize solutions for clients' needs.

With an extensive client portfolio, our IT infrastructure solutions cover the services spectrum. Architecture, design, engineering, and security are embedded in each of our core services.

By bridging today's IT challenges with transformational technologies, CSC is harnessing the full potential of the Web to partner with our clients in the delivery of information services anytime, anywhere, in a secure, reliable, and cost-effective manner.

The ability to create network and business value is maximized through collaboration. However, to effectively collaborate and create value, the IT infrastructure must emerge from behind the firewall to live on the Web.

We are at an inflection point where public infrastructure is mature and its adoption is accelerating exponentially. The network has become the universal enabler for information services, providing a system where the ability to meet the need for communications and computing services transcends geography and dispersed physical assets. The mashup of complementary applications on a single Web page is the new business model, and open source products continue to gain traction in delivering mission-critical services.

Service delivery models are fundamentally changing. Customers are resistant to buying physical things — they are now more focused on procuring services, with corresponding service level agreements. The 21st Century transformation of the IT service delivery model is headed to a “virtual, on-demand” environment. In this connected landscape, systems that physically existed within the confines of an enterprise will soon occupy a place within the network.

This virtual environment will be enabled by robust and highly efficient information security technologies and services, and CSC is leading the way.

CSC is the only Tier 1 IT infrastructure solutions and managed services provider with a carrier legacy spanning decades of experience. CSC:

- Is recognized by industry analysts such as Gartner as a leader in systems and services that span the IT infrastructure
- Leverages a federal division focused exclusively on security solutions and services
- Researches, tests, and validates emerging technologies and business solutions in our Centers of Excellence to enhance and expand our offerings to respond to the dynamic needs of our public sector clients
- Applies enterprise architecture principles rooted in service-oriented architecture concepts, with emphasis on embedding information security in every business solution
- Employs proven practices guided by the Information Technology Infrastructure Library (ITIL) with a focus on business service management that unites missions, strategies, architectures, and services

CSC — delivering the *right* solutions and services at the *right* time at the *right* price.
