

SECURITY POLICY COMPLIANCE AND REPORTING SERVICE

Compliance Made Easy

CSC
NORTH AMERICAN
PUBLIC SECTOR

Compliance costs – and the rules keep changing. New laws and complex standards like FISMA, HIPAA, SOX, GLBA, FFIEC, COBIT, DCID, Base II, COPPA, ITIL, ISO 17799 and PCI DSS are moving targets. Each new requirement multiplies expenses across the enterprise. CSC's managed security services reduce costs and keep you ahead of the power curve with easy “out of the box” compliance solutions.

Benefits

CSC believes that a true contractor-government partnership is one based on total mission commitment and trust. Our security work with the EPA is a fine example of this true partnership and finding the joint vision and the roadmap to effective security management. Jointly, CSC and EPA people addressed security processes and technology and their efforts resulted in the EPA improving from a historical (D-) FISMA score in 2002 to an A+ in FY2005.

Security Policy Compliance and Reporting Demonstration

CSC's Enterprise Network Managed Services Center of Excellence (ENMS COE) serves as an optimal environment for research, development, evaluation and testing. Automated compliance management tools are fully available in the COE for demonstration. These tools have enabled CSC to create a standardized, repeatable process, which provides a more cost-efficient bottom line.

Compliance Management and Reporting

Know your rules: Visibility is key to identifying gaps and simplifying management. CSC brings the expertise and tools to efficiently catalog, control

and cross-reference your policies and procedures down to individual requirements. We can visually model your organization's compliance with applicable laws and regulations. When rules change, we can also show you the shortest path to reach your new security goals.

Set your targets: Whether you operate in the federal or commercial sectors, your organization is required to identify deficiencies and plan for improvements.

CSC automates this tailoring and reporting process so you can know your “report card” early and measure the risks specific to your organization. We deliver the actionable intelligence you need to cost-effectively plan your future investments to address your security priorities.

Monitor compliance in real time: Has your network grown out of control? Have unprotected wireless and mobile computing devices extended and

exposed your perimeter? Policies and procedures are only effective when enforced. CSC can routinely audit your security infrastructure and systems to regain control of your network and ensure consistent compliance with your security objectives.

Data Protection and Auditing

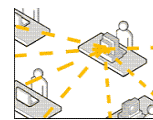

End-point security: Laptops, PDAs and other mobile devices are the weakest link in your organization's security. Once they leave your facility, you lose

control. You must support your users' telework and travel requirements, but you can't afford any negative publicity for data theft. That's why CSC offers comprehensive protection for your clients and networks.

We arm your laptops and mobile devices with Federal Information Processing Standards (FIPS) certified encryption so your information is safe on the road, even if your hardware is lost or stolen.

We even protect your users against outside threats like unsafe Web sites and e-mail traffic. Users are warned of unsafe actions. Dangerous scripts and phishing attempts are stopped in their tracks. Nothing is sent, received or transferred from these devices without your approval. Every action you want to monitor is logged.

Further, we protect your network from any threats your users may bring back with them. New and returning computers will get a “check-up” before they reconnect, ensuring they have the latest anti-virus/spyware running and that they meet your hardening requirements.

Network Information Flow Enforcement:

It's all about your data. Your IT investments support your critical business processes. However, conventional access controls can be bypassed by administrators and are complex to manage. CSC ensures real-time information access enforcement and auditing with state-of-the-art technology. We help you rise above the multitude of files, folders and firewall rules to clearly see and positively control how information really flows through your enterprise. And, because we operate at the lowest level, even administrators have to play by your rules. You have complete control over data in transit and at rest. Finally, we ensure full compliance with your auditing requirements so you're covered if you suspect unauthorized attempts to access or leak information out of your networks.

Summary of the Compliance Service

- Laptop encryption
- Control data movement
- Control Web activity, unauthorized and/or malicious software
- Control interface devices (USB, printers)
- Centralize log data storage
- Log, warn or block user activity
- Automated policy compliance statements
- Capture "zero-day" attacks so they can be more quickly mitigated

CSC's Security Policy Compliance and Reporting Service provides:

- Media protection (NIST 800-53, MP1,2,5)
- Access control protection (NIST 800-53, AC 1 -6,13,19)
- Audit and accountability services (NIST 800-53, AU1-9,11)
- System and communication protection policy and procedures (SC 1-7).

Whether you're charged with protecting information in the public or private sectors, CSC's Security Policy Compliance and Reporting Service makes compliance easy and affordable, right "out of the box."
